

Thank you for ordering a Water for Wildlife water station. Set-up instructions are below. If you have any questions, please don't hesitate to contact us at waterforwildlife@animalsaustralia.org. Thank you for being part of this life-saving initiative and for everything you do to care for our precious wildlife.

WHAT YOU'LL NEED

1. Water station (supplied).
2. 2 x straps to secure the water station to a tree or fence (supplied).
3. A portable water carrier (Marquee 20L Water Storage Containers are available from Bunnings for \$4.50).

INSTALLATION

You can view an instructional video at w4w.org.au/setup or read on below.

1. Fill the water station through the spout at the bottom (the lid has been permanently secured to prevent any possibilities of wildlife drowning). To fill the water station, lie it down horizontally and pour in the water. You'll know it's full when it spills over the lip of the spout. Each station carries 15 litres of water.
2. Select a site with level ground and shade from the afternoon sun.
3. Stand the station up and secure it to a tree or fence with two straps (we suggest one near the top and one near the bottom).
4. Place some sticks or rocks in the bottom of the water station to prevent smaller animals or birds drowning.
5. A few days after installation, just pick up the water station, or tap it to determine remaining water level. Based on this, you can work out how regularly you'll need to refill it.
6. Ensure that you can regularly visit and refill your station. Check that there are no leaks, all parts remain secure and that the lid remains glued on at all times.
7. If your station is leaking, it will need to be re-glued. The station will need to be fully dried before re-gluing.
8. If you can no longer care for a water station please take it down and consider donating it to a local wildlife group that can use it, or recycle the unit.
